Aptitude Practice Mock Paper with Solutions

Prepo by Avneesh — Model Questions with Step-by-Step Solutions | Category: SOLVED MOCK PAPERS

Section A: Quantitative Aptitude (Sample Problems)

Q1. A train running at 54 km/h takes 20 seconds to pass a platform 150m long. Find train length.
Solution: Speed = 54 * (5/18) = 15 m/s. Total distance = Speed * Time = 15 * 20 = 300m.
Total distance = Train Length + Platform Length => 300 = Train Length + 150 => Train Length = 150m. (Answer: 150m)

Q2. A sum of money doubles itself in 5 years at simple interest. In how many years will it become 4 times?
Solution: Let Principal = P. Amount = 2P, so SI = P. Formula: SI = (P * R * T)/100 => P = (P * R * 5)/100 => R = 20%.
For amount to become 4P: SI required = 3P. 3P = (P * 20 * T)/100 => T = 15 years. (Answer: 15 years)

Section B: Logical Reasoning (Sample Problems)

Q3. Pointing to a photograph, a man says: "She is the daughter of my grandfather's only son."
Solution: "My grandfather's only son" = Man's father. "Daughter of my father" = Sister of the man.
Therefore, the woman in photograph is the man's Sister. (Answer: Sister)
