Technical MCQ Placement Model Paper

Prepo by Avneesh — OOP, DBMS, SQL & C/Java Output Prediction with Solutions | Category: SOLVED MOCK PAPERS

Section 1: Output Prediction & Programming Logic

Q1. In C/Java, what is the output of: int a = 5; int b = a++ + ++a; System.out.println(b);
Solution: a++ uses current value (5) and increments a to 6. Then ++a increments a from 6 to 7 and uses 7. Total = 5 + 7 = 12. Value of a becomes 7. Output: 12. (Answer: 12)

Q2. Which SQL keyword is used to eliminate duplicate rows from a query result set?
Solution: The DISTINCT clause filters out identical rows returned by the SELECT query.
Syntax: SELECT DISTINCT column_name FROM table_name; (Answer: DISTINCT)

Section 2: Database Systems & Operating Systems

Q3. In DBMS, which normal form eliminates transitive functional dependency?
Solution: 3NF (Third Normal Form) requires relation to be in 2NF and have no transitive dependency (where non-prime attribute X determines non-prime attribute Y). (Answer: 3NF)
